

AmbiSecure

EMBEDDED SECURITY · IDENTITY · HARDWARE-ROOTED

AmbiSecure

FIDO authenticators, JavaCard applets, secure elements, PKI IoT trust — engineered by the Ambimat Electronics team, shipping since 1981.

EST. 1981 · 40+ YEARS EMBEDDED ENGINEERING

THE AMBIMAT GROUP

AmbiSecure within the Ambimat

The security and trusted-identity business unit of Ambimat Electronics — an embedded engineering team that has shipped hardware since 1981 and identity systems since 2017.

AmbiSecure

SECURITY

AmbiPower

UTILITY

AmbiSecure is the embedded security and identity layer across the Group's connected products.

THE PLATFORM

The AmbiSecure security stack

Enterprise • telecom • IoT systems	CONSUME
Device identity & authenticators	OnePass
Applets — FIDO • PIV • OpenPGP • IoT	JavaCard
AmbiSEC module — nano-card / MFF2	PACKAGE
Secure silicon — EAL6+ Secure Element	ROOT

HARDWARE-ROOTED TRUST

A chain that begins below the OS

Trust is anchored in an EAL6+ secure element and carried up through transitions — not inherited from software that can be cloned or spoofed

— Custom applets define how keys, credentials, identity and policy are enforced inside the secure element

PORTFOLIO

Product & service portfolio

AUTHENTICATORS

OnePass ecosystem

OnePass Card

Multi-application FIDO2 smart card

OnePass Bio Card

On-card fingerprint biometrics

OnePass USB Key

FIDO2 / U2F security key

BioKey & Tappable

Biometric USB key & NFC tap

PLATFORMS & APPLETS

Engineering surface

IoT Security Co-Processor

Identity below the firmware

FIDO Validation Server

Multi-tenant WebAuthn SaaS

FLAGSHIP · ONEPASS CARD

One identity card. Phishing-resis

Replace badges and separate security keys with a single FIDO2 sma
— multiple identity roles, selectable on one EAL6+ secure element.

- ✓ FIDO2 / U2F passwordless
- ✓ PIV & OpenPGP roles
- ✓ Door access & NDEF
- ✓ Issuer keys & brand artwork

FOR · ENTERPRISE · GOVERNMENT · SECURE ACCESS

Backed by AmbiSecure's Java Card & secure-element engineering — adaptable to custo
specific workflows.

AUTHENTICATORS · USB KEY & BIOKEY

USB Key & BioKey

OnePass USB Key

A FIDO2 / U2F hardware key — plug in and tap to confirm presence. No codes to type, no software to run.

- ✓ FIDO2 & U2F, EAL6+ secure element
- ✓ No battery, no network required
- ✓ Compact, metallic, waterproof options

AUTHENTICATION

FIDO2 & modern authentication

Public-key cryptography replaces shared-secret passwords. The private key is never exposed — phishing-resistant by construction.

AmbiSEC MODULE & APPLETS

AmbiSEC module & Java Card eng

We architect, build, personalise and validate applets in-house — ship element as a nano-card or solderable MFF2 module.

- JavaCard 3.x
- GlobalPlatform
- SCP03
- JCOP 3.1
- CAP files

DEVELOPMENT SERVICES

Java Card applet development services

Custom secure-element applets — for authentication, identity, PKI, etc. — engineered on EAL6+ silicon.

DELIVERED WITH

APDU & data-model design

GlobalPlatform / SCP03

Testing under real SE constraints

DEVICE IDENTITY

IoT device identity & lifecycle

PHASE 01 Factory

PHASE 02 Field

PKI & ATTESTATION

Embedded PKI, attestation & key

SUPPORTING CAPABILITY

eSIM / SIM-Auth — the same trust

The eUICC is itself a secure element — so the same EAL6+ secure-element and key-custody expertise extends into telecom-grade embedded identity.

- ✓ SGP.22 / SGP.32 eUICC remote provisioning
- ✓ OpenID Connect applet, automotive & M2M variants
- ✓ Hardens SMS OTP with SIM-rooted authentication

SERVICES & ENGAGEMENT

Services & engagement model

WHAT WE DELIVER

- ✓ Architecture & product security design review
- ✓ Secure-element feasibility & silicon selection
- ✓ Java Card applet development — define to deploy
- ✓ Personalisation, certification & deployment support

HOW

- Architecture
- Implementation
- Manufacturing & distribution

SECTORS

Target sectors & use cases

01 Government & defence PIV, eID & ePassport identity programmes	02 Enterprise IT & CISOs Passwordless workforce & device authentication
04 Connected mobility & IoT OEMs V2X PKI & device identity in silicon	05 Transit & smart cities SAM-backed offline fare & access control

DIFFERENTIATION

An embedded team, not a security

AmbiSecure combines embedded engineering, security development, hardware-rooted identity and authentication software security.

GENERIC IoT / SOFTWARE SECURITY VENDOR

- Ships apps, dashboards & software agents
- Trust stops at the software layer
- Integrates someone else's secure element
- Three vendor handoffs, three RFPs

AMBI

- ✓ Owns the secure element
- ✓ Integrates hardware-rooted identity and authentication
- ✓ Ships secure element
- ✓ Owns the secure element

NEXT STEPS

A security problem that lives in hardware?

Talk to engineers, not BDRs. Tell us what you are building and what is realistic, standards-aware, and shipped before.
